REC_DS using C_Week 7_COD_Question 1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Ravi is building a basic hash table to manage student roll numbers for quick lookup. He decides to use Linear Probing to handle collisions.

Implement a hash table using linear probing where:

The hash function is: index = roll_number % table_sizeOn collision, check subsequent indexes (i+1, i+2, ...) until an empty slot is found.

You need to:

Insert a list of n student roll numbers into the hash table. Print the final state of the hash table. If a slot is empty, print -1.

Input Format

The first line of the input contains two integers n and table_size, where n is the

number of roll numbers to be inserted, and table_size is the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert into the hash table.

Output Format

The output should print a single line with table_size space-separated integers representing the final state of the hash table after all insertions.

If any slot remains unoccupied, it should be represented as -1.

Refer to the sample output for formatting specifications.

Sample Test Case Input: 47 50 700 76 85 Output: 700 50 85 -1 -1 -1 76 Answer #include <stdio.h> #define MAX 100 // Initializes the hash table to -1 void initializeTable(int table[], int size) { for (int i = 0; i < size; i++) { table[i] = -1: } // Inserts roll numbers into hash table using linear probing void insertIntoHashTable(int table[], int size, int arr[], int n) { for (int i = 0; i < n; i++) { int roll = arr[i]; int index = roll % size: // Linear probing to resolve collisions while (table[index] != -1) {

```
index = (index + 1) % size;
   table[index] = roll;
}
}
     // Prints the hash table
     void printTable(int table[], int size) {
       for (int i = 0; i < size; i++) {
         printf("%d", table[i]);
         if (i != size - 1) {
            printf(" ");
printf("\n");
     int main() {
       int n, table_size;
       scanf("%d %d", &n, &table_size);
       int arr[MAX];
       int table[MAX];
scanf("%d", &arr[i]);
                                                        241801101
       initializeTable(table, table_size);
       insertIntoHashTable(table, table_size, arr, n);
       printTable(table, table_size);
       return 0;
     }
                                                                            Marks: 10/10
     Status: Correct
